Harsh Karla

Computer Networking & }
operating system } Geeks For geeks course

Sumeeet Malik sir

Anuj Kr. Sharma

Tushary Roy

Aditya Jaiswal

Take U Forward

Be consistent

12000 → Yogesh yojender

** First make command on basic datastructure then move
on competitive coding

★ Try to do same questions on GFG in multiple ways.

DS + Algo

5 to 6 times revision

Atleast 1500 Qns

Practice

2 to 3 month

Summer vacation

Qns of Competitive Coding

Read most interview experience

Array → Atleast 100 Qns

String → Atleast 100 Qns 150 Qns

Dynamic programming → 70 - 75 Qns [Above 12 laks]

Linked List → 70 to 75 Qns

& remaining topic → 20 to 25 % Qns / 50 Qns per topic

Puzzles

4th semester → end [Mini project] → at least one hour you should able to speak

So

1 is easy
2 is medium
10 hard

Interview experiences

near interview at least 50

Puzzles

5-5-5 Puzzles

→ Aptitude, reasoning, programming

MCQs
in QuizComps
Mock Tests

- 2 lectures every week
- Complete Quizzes & Assignment along with video lecture to master each section you study
- Almost after every lecture there is assignment
- Assignment have deadline submission after that there is penalty
- Apart from assignment there will be frequent test
- there is score on submission of test. Any submission post deadline will score zero
- Watching hint videos there is no penalty
- There is code solution for every problem whether in lecture or test. After watching code solution & submission you won't get any marks
- $$\text{score in leaderboard} = \frac{(\text{your score in that topic} / \text{max score of topic}) * \text{weightage of topic}}$$
- You complete an assignment when you have attempted at least 60% of MCQ problem and you score an average of at least 60% in code problems, within an assignment
- You complete a lecture when you have attempted at least 60% of objective problems, have scored at least 60% in

- Complete Quizzes & Assignment along with video lecture to master each section your study.
- Almost after every lecture there is assignment.
- Assignment have deadline submission of project there promptly.
- Apart from Assignment, there will be frequent test.
- There is score on submission of test. Test submission postdeadline will score zero.
- Watching video lecture there is no penalty.
- There is calculation for every problem whether in lecture or test. After watching video solution & explanation you will not get any marks.
- $\text{score in test/assignment} = (\text{your score in that test/assignment}) \times \text{weightage of test/assignment}$
- You complete an assignment when you have attempted at least 50% of MCQ problem and attempted at least 50% of at least 50% in case you score an answer or at least 50% in case you score an answer.
- You complete a lecture when you have attempted at least 50% of MCQ problem and attempted at least 50% in case you score an answer or at least 50% in case you score an answer.

each code problems, and have seen at least 60% of the total videos, within a lecture.

→ you complete a test when you have submitted the test

→ After next 10 days, a penalty of 25% will be applied on your problem on deadline

2. For next 5 days, a penalty of 50% will be applied on your submission

→ 1. Lecture videos will be accessible by for the next five weeks from release date of the last lecture of the course

2. Hint videos/solution videos, quizzes, questions within a lecture, assignment and notes are available to you for lifetime.

correct problems and have them of least cost of the total system within a lecture.

→ you complete a test when you have submitted it.

→ After next 20 days, penalty of 25% will be applied to your problem and will be 50%.

→ For next 2 days, penalty of 25% will be applied to your submission.

→ Lecture videos will be accessible by for the next 2 weeks from release of the test before of the course.

→ Hint: After solution video, quiz questions within a lecture, assignment and notes are available to you for 10 days.

①

③

④

⑤

F

→

→

To Solve any problem

- ① Analyse your problem
↓
- ② Breakdown problem into smaller subparts
↓
- ③ Write down solution on paper
↓
- ④ Verify your solution
↓
- ⑤ write code ← formality step

Flowcharts

INTRODUCTION

- Diagrammatic representation illustrating a solution to a given problem
- Allows you to breakdown any process into smaller steps and display them in visual pleasing way

→ Add Two Numbers

→ Read Principal, Rate & Time & Print SI

Decision Box

/ → divide

$$5/2 = 2$$

$$4/8 = 1$$

$$10/2 = 5$$

% → modulus / Remainder operators

$$5 \% 3 = 2$$

$$3 \% 3 = 0$$

$$4 \% 2 = 0$$

→ check whether Number is odd or even

→ Find largest of Three Numbers

LOOP

→ Print Numbers From 1 To N

→ Find sum of Numbers From 1 To N

Largest OF N Numbers

How to check prime

→ Print Fibonacci Series till given Number.

$N=6$

$a=0, b=1$	$c=5$
$c=1$	$a=3$
$a=1$	$b=5$
$b=1$	
$c=2$	$c=8$
$a=1$	$a=5$
$b=2$	$b=8$
$c=3$	$c=13$
$a=2$	$a=8$
$b=3$	$b=13$

→ Draw a flowchart to take a number N input from user and check if that number is member of fibonacci series or not.

strider's sheet

8-10 hours per day → 1 month 6 Qns/day

4 hours → 2 month 3 Qns/day

DSA core subject, Project (1) why did you make this project?
Resume

(2) what techs you used? & why

Node.js
why preferred Node.js & why
you considered this over
others [Orango]

(3) what are difficulties that
you faced & what did you do to
overcome them.

*** Make notes of question

↓
Revise it

highly recommend

Prepare 4-5 page script
where you actually wrote
about things that you want
to say to interviewer & make
sure that should span about
4-10 minutes

↓
+ interviewer judges on your
briefing skill [how you are
presenting it]

In Face to Face interview [even if you know answer]

Don't jump directly to solution

IF jumped

↓
they will

change the question

(1) start with brute force approach

(2) Think about 4-5 minutes & then give
best approach

↓
explain throughout
